

**AMENDMENTS TO THE CLAIMS**

**Please amend the Claims as follows. Insertions are shown underlined while deletions are ~~struck through~~.**

1 (original): A secretory or membrane-binding chimeric protein composed of an energy-generating protein and an energy-receiving protein linked one another wherein energy transfer can arise between the energy-generating protein and the energy-receiving protein.

2 (currently amended): The secretory or membrane-binding chimeric protein according to claim 1 having any structure selected from the group consisting of the following 1) to 6):

- 1) [secretory energy-generating protein]-[energy-receiving protein];
- 2) [secretory energy-receiving protein]-[energy-generating protein];
- 3) [membrane-binding energy-generating protein]-[energy-receiving protein];
- 4) [membrane-binding energy-receiving protein]-[energy-generating protein];
- 5) [signal peptide]-[energy-generating protein]-[energy-receiving protein]; and
- 6) [signal peptide]-[energy-receiving protein]-[energy-generating protein].

3 (currently amended): The chimeric protein according to claim 1 wherein a monitor peptide is introduced between the energy-generating protein and the energy-receiving protein or inside the energy-generating protein or ~~inside the~~ energy-receiving protein so as to retain an energy-generating property or an energy-receiving property, ~~and~~ wherein the energy transfer is inhibited by cleaving the monitor peptide.

4 (currently amended): The chimeric protein according to ~~any of claims 1 to 3~~ wherein the energy-generating protein is a photoprotein.

5 (original): The chimeric protein according to claim 4 wherein the photoprotein is luciferase.

6 (currently amended): The chimeric protein according to ~~any of claims 1 to 3~~ wherein the energy-receiving protein is a fluorescent protein or a colored protein.

7 (original): The chimeric protein according to claim 6 wherein the fluorescent protein is GFP, YFP, BFP, CFP, DsRED or RFP.

8 (original): The chimeric protein according to claim 1 having an amino acid sequence represented by SEQ ID NO:1.

9 (currently amended): A polynucleotide encoding the secretory or membrane-binding chimeric protein according to ~~any of claims 1 to 8~~, or a complementary chain thereof.

10. A vector comprising the polynucleotide according to claim 9.

**Int'l Appl. No.** : **PCT/JP2003/011285**  
**Int'l Filing Date** : **September 4, 2003**

11 (original): A transformant transformed with the vector according to claim 10.

12 (original): A method for producing a secretory or membrane-binding chimeric protein including a step of culturing the transformant according to claim 11 in a medium, and a step of collecting the secretory or membrane-binding chimeric protein from the medium.

13 (original): A method for measuring a gene transcription activity in a host cell, characterized in that the transformant according to claim 11 is cultured and energy transfer in a secretory or membrane-binding chimeric protein secreted in a medium or bound to a cell membrane is quantified.

14 (original): A method for screening a drug which regulates gene expression in a cell, including a step of culturing the transformant according to claim 11 in the presence of a drug candidate compound in a medium, and a step of quantitatively comparing energy transfer in a secretory or membrane-binding chimeric protein secreted in the medium or bound to a cell membrane in the presence or absence of the candidate compound.

15 (original): The method according to claim 14 wherein the drug which regulates the gene expression in the cell is a drug which regulates gene transcription expression or an enzyme activity of an enzyme which regulates protein modification.

16 (original): The method according to claim 14 wherein the transformant comprises a polynucleotide sequence represented by SEQ ID NO:1.
